

AI travel app provides bespoke consultancy services

Creative, sustainable travel options are revolutionizing the industry. Accessibility experts run [a travel site](#) specifically for those with additional mobility needs. [A peer-to-peer platform](#) connects like-minded travelers over the age of 50, providing opportunities to make new friends. For on-the-go, bespoke travel consultancy services, new iOS travel app [Lola](#) combines artificial intelligence with expert staff.

Currently invitation-only, Lola chats with travelers to help with any travel tasks. If a flight is cancelled, the Lola team finds alternatives. If a traveler wants to check out the local bar scene, Lola provides recommendations. Lola staff book tickets for events and tailor advice to everything from weather to airport security gate wait-times.

Now available in the United States, international versions are planned and a fee structure is being considered. Lola can be used to plan international travel, but presently only accepts US dollars. Despite fears of a robot-led future, could the combination of AI efficiency and human personality provide the ultimate customer service?
